SUMMARY

SAP Certified Back-End Developer (ABAP Cloud) at Capgemini with full-stack development experience across React, Node.js, and REST APIs, plus applied AI/ML work in NLP-based matching and on-device inference. B.Tech Computer Science graduate (2026), 8.06 CGPA. Solved 1,000+ DSA problems; strong foundation in data structures, algorithms, and system design.

TECHNICAL SKILLS

Languages: C++, Java, Python, JavaScript

Backend & Web: Node.js, Express, REST APIs, MongoDB, Flask

Frontend & Mobile: React, Android (Kotlin, Java)

AI/ML: TensorFlow Lite, NLP fundamentals, LLM-based scoring/recommendation systems

Tools & Platforms: Git, GitHub, Linux, Firebase

SAP: ABAP, ABAP on HANA, RAP, SAP Fiori, CDS Views, OData Services

EXPERIENCE

Capgemini | SAP Trainee, ABAP Cloud

Vadodara, India | January 2026 – April 2026

- Completed a structured SAP training program covering ABAP on HANA, RAP (RESTful Application Programming Model), CDS Views, and Fiori/OData services, and practiced applying these to S/4HANA use cases as part of SAP Certified Associate onboarding

PROJECTS

HireNova – AI Resume Analysis Platform | *React, Node.js, MongoDB, NLP*

- Designed and built a full-stack resume-to-job matching system, combining a resume parsing pipeline with NLP-based semantic similarity scoring to rank candidate-job fit
- Architected a set of REST API endpoints handling resume parsing, similarity scoring, and recommendation retrieval, separating parsing, scoring, and API layers for scalability
- Integrated an LLM-based scoring layer to generate qualitative match recommendations alongside the numeric similarity score

Event & Club Management System | *Node.js, Express, MongoDB*

- Built a role-based backend platform for managing college events, with distinct access levels for admins, club organizers, and students
- Designed event-driven notification workflows and implemented secure authentication to automate status updates and enforce role-based permissions

Farmer Friend – Crop Disease Detection App | *Android, TensorFlow Lite, Flask*

- Developed an Android app for real-time crop disease identification, running a TensorFlow Lite model directly on-device for low-latency inference
- Built a Flask backend as a fallback inference service, and optimized the on-device model to minimize prediction latency and memory footprint

CERTIFICATIONS

- SAP Certified Associate – Back-End Developer, ABAP Cloud (C_ABAPD)
- Google Arcade Program – multiple certifications

All badges: [Credly Profile](#)

EDUCATION

Parul University – Bachelor of Technology, Computer Science and Engineering

Vadodara, India | 2022 – 2026 | CGPA: 8.06 / 10

ACHIEVEMENTS

- Solved 1,000+ Data Structures & Algorithms problems across platforms; 600+ day continuous LeetCode streak
- Top 45 finalist, Vadodara Hackathon 5.0
